STRETCH WRAPPING MACHINES

THE COMPLETE SOLUTION

WE ARE YPS.

IDEAL END-OF-LINE PALLET WRAPPING SOLUTIONS FOR ANY OPERATION.

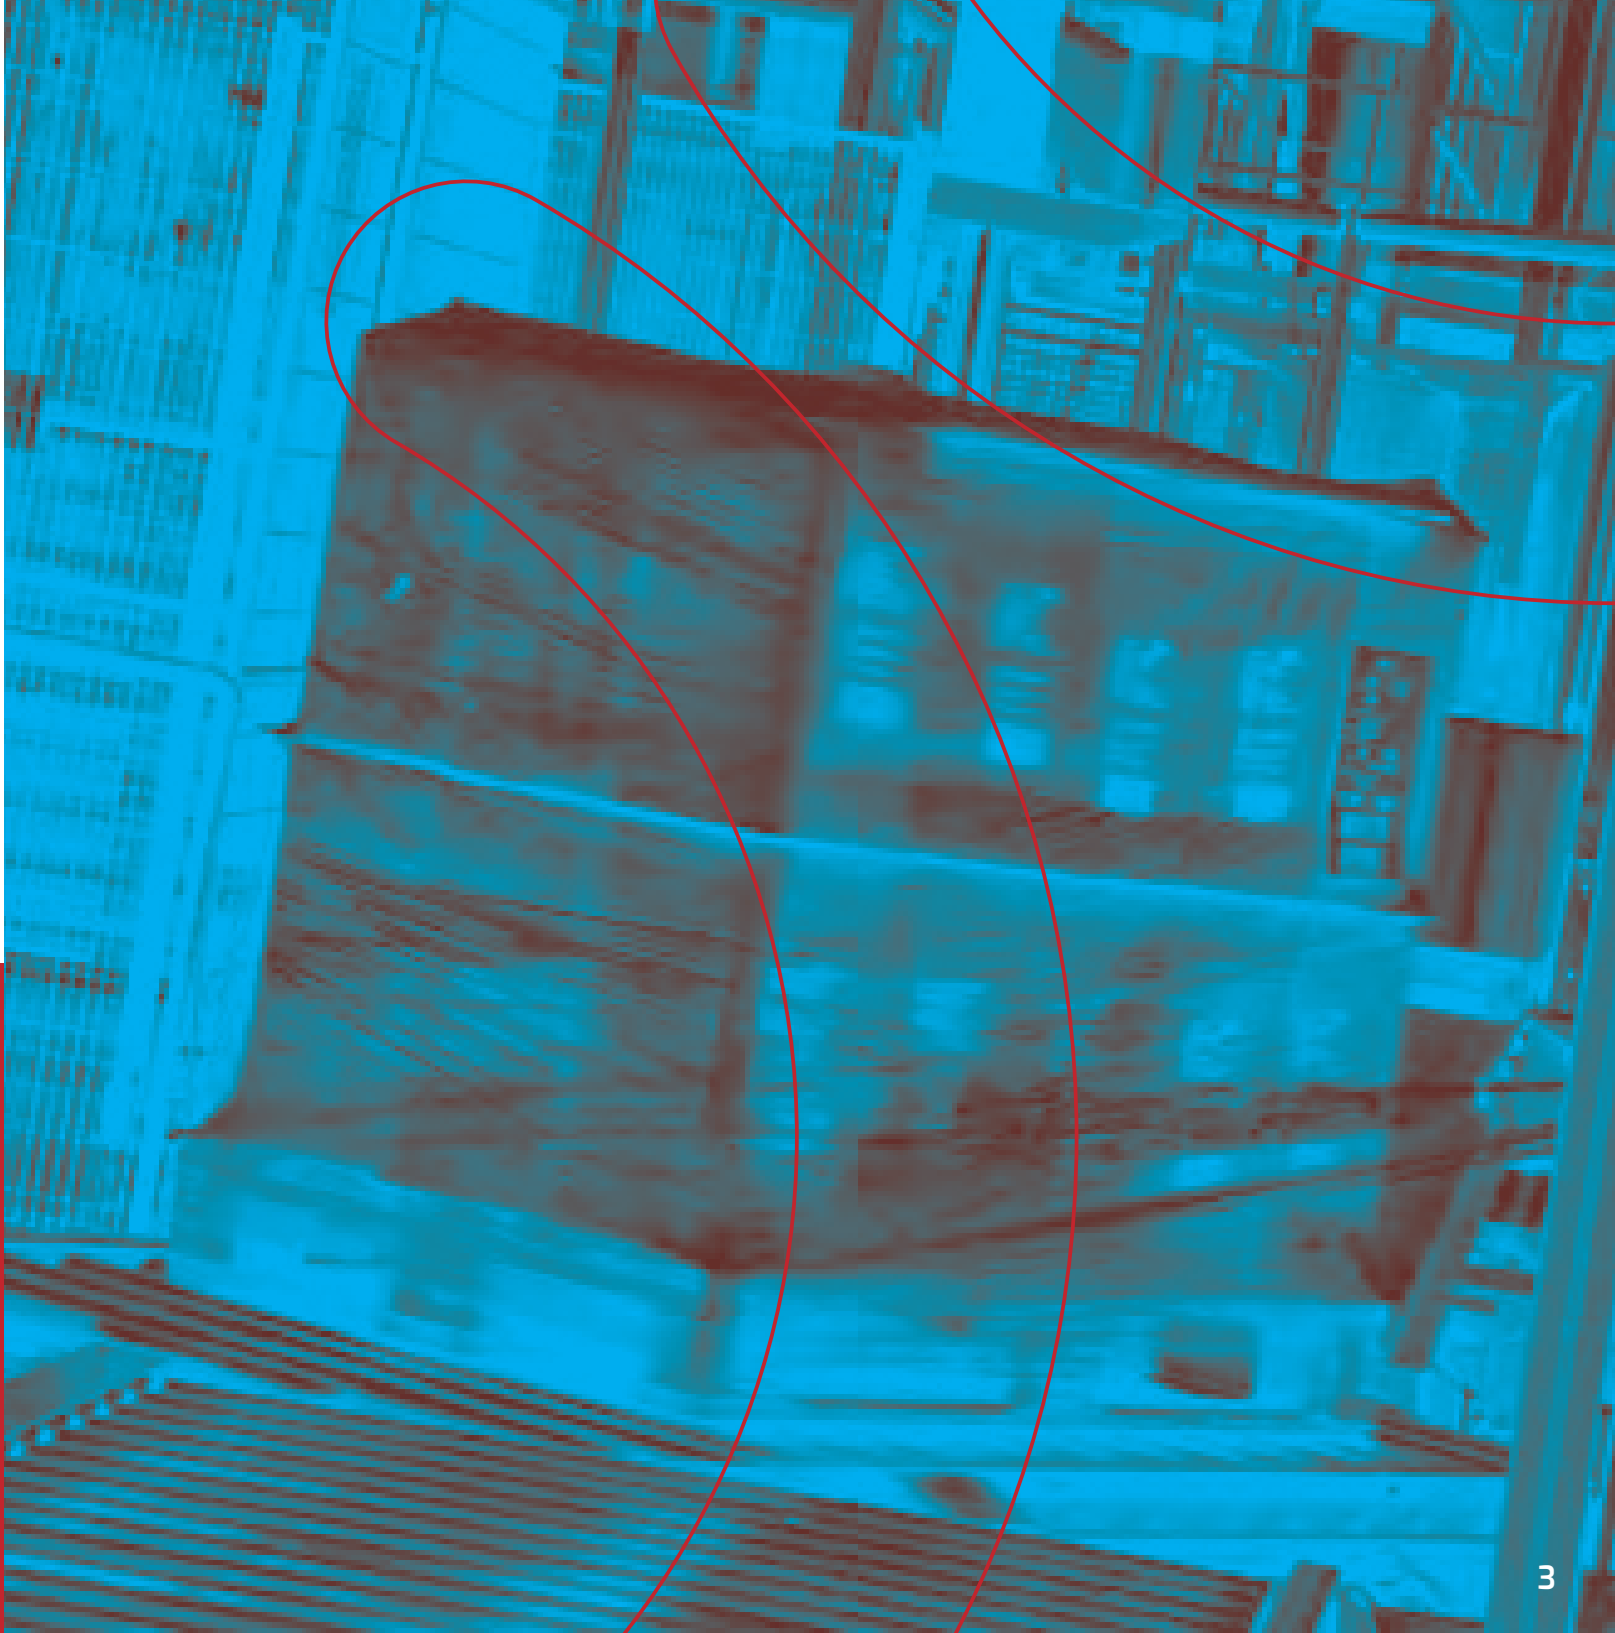

Look no further than YPS for stretch wrapping machines that will streamline and complete your packaging operation, leaving your goods **ready for transit or warehouse storage**.

Teaming up with the industry-leaders Robopac and TOSA, we are pleased to present these ideal end-of-line machines dedicated to high performance pallet wrapping. Machines are available in both **semi-automatic** and **fully automatic** variations with an impressive choice of specifications and optional extras to suit every application and any warehouse setting, and to comply with industry regulations.

To complement these leading machines, YPS stocks a **range of advanced stretch films**, with an array of different qualities, suitable for a wide range of applications. These include extreme stretch, low stretch force and breathable - and all are available for next day delivery across the UK.

OUR STRETCH WRAPPING MACHINES CAN WRAP PALLETS OF:

- | | | |
|---|---|---|
|  Boxed Products |  Furniture |  Building products |
|  Products in sacks |  Sanitaryware |  Automotive products |
|  Trayed products |  Windows & doors |  Horticulture |
|  Mixed pallets |  Food & beverage |  Chemical drums |

FULLY AUTOMATIC PALLET WRAPPERS

High performance and high speed, conveyor-fed equipment.

Whatever your application, our collection of fully automatic pallet wrapping machinery from TOSA - the premium name in stretch wrapping - is equipped to meet all your needs.

Our fully automatic pallet wrappers are comprised of turntable, rotating arm and rotating ring models which can all be configured to fit your exact requirements.

Turntable system:

Steady and compact pallet wrapper, with additional safety features for operators.

Rotating arm:

Ideally suited to applications where pallets need to be kept motionless: the arm encircles the stationary pallet, dispensing the film evenly.

Rotating ring:

A high-speed system for unstable or heavy pallets, this rotating ring pallet wrapper has been designed to reduce film consumption.

Equipment available with impressive stretch capacity, with some models achieving up to 400%.

A choice of speeds, configurations, film carriages, loading ramps and wrapping cycles including standard, dust-proof and water-proof are also available.

Whether you are looking for a stand-alone machine or a more integrated system, YPS can help.

Key Benefits :

- Designed with low maintenance, high performance and high speed in mind.
- Film roping, tensioning and pre-stretch settings included for a perfect wrap.
- Impressive stretch capacity with some models achieving up to 400%.
- Full expert site audits conducted to improve and streamline your operation.
- Included service contract to deliver long-term hassle-free maintenance.

“Since installation we have indeed seen production levels improve as well as the quality of our wrapped pallets.”

Tyson Bonham, Abbey Chemicals

SEMI-AUTOMATIC PALLET WRAPPERS

Operator-loaded semi-automatic pallet wrapping.

Our portfolio of semi-automatic pallet wrapping machinery from Robopac includes an ideal model for almost all warehousing operations.

The range includes both rotating arm, self-driving robot and turntable models, which can be customised for a fully bespoke solution.

Turntable:

A wide choice of turntable models is available including standard, stainless steel, freezer-proof and low profile versions.

Rotating arm:

Perfect for unstable loads as the wrapper's arm encircles the load to wrap it. Extra-wide models are available for large pallets.

Robot wrappers:

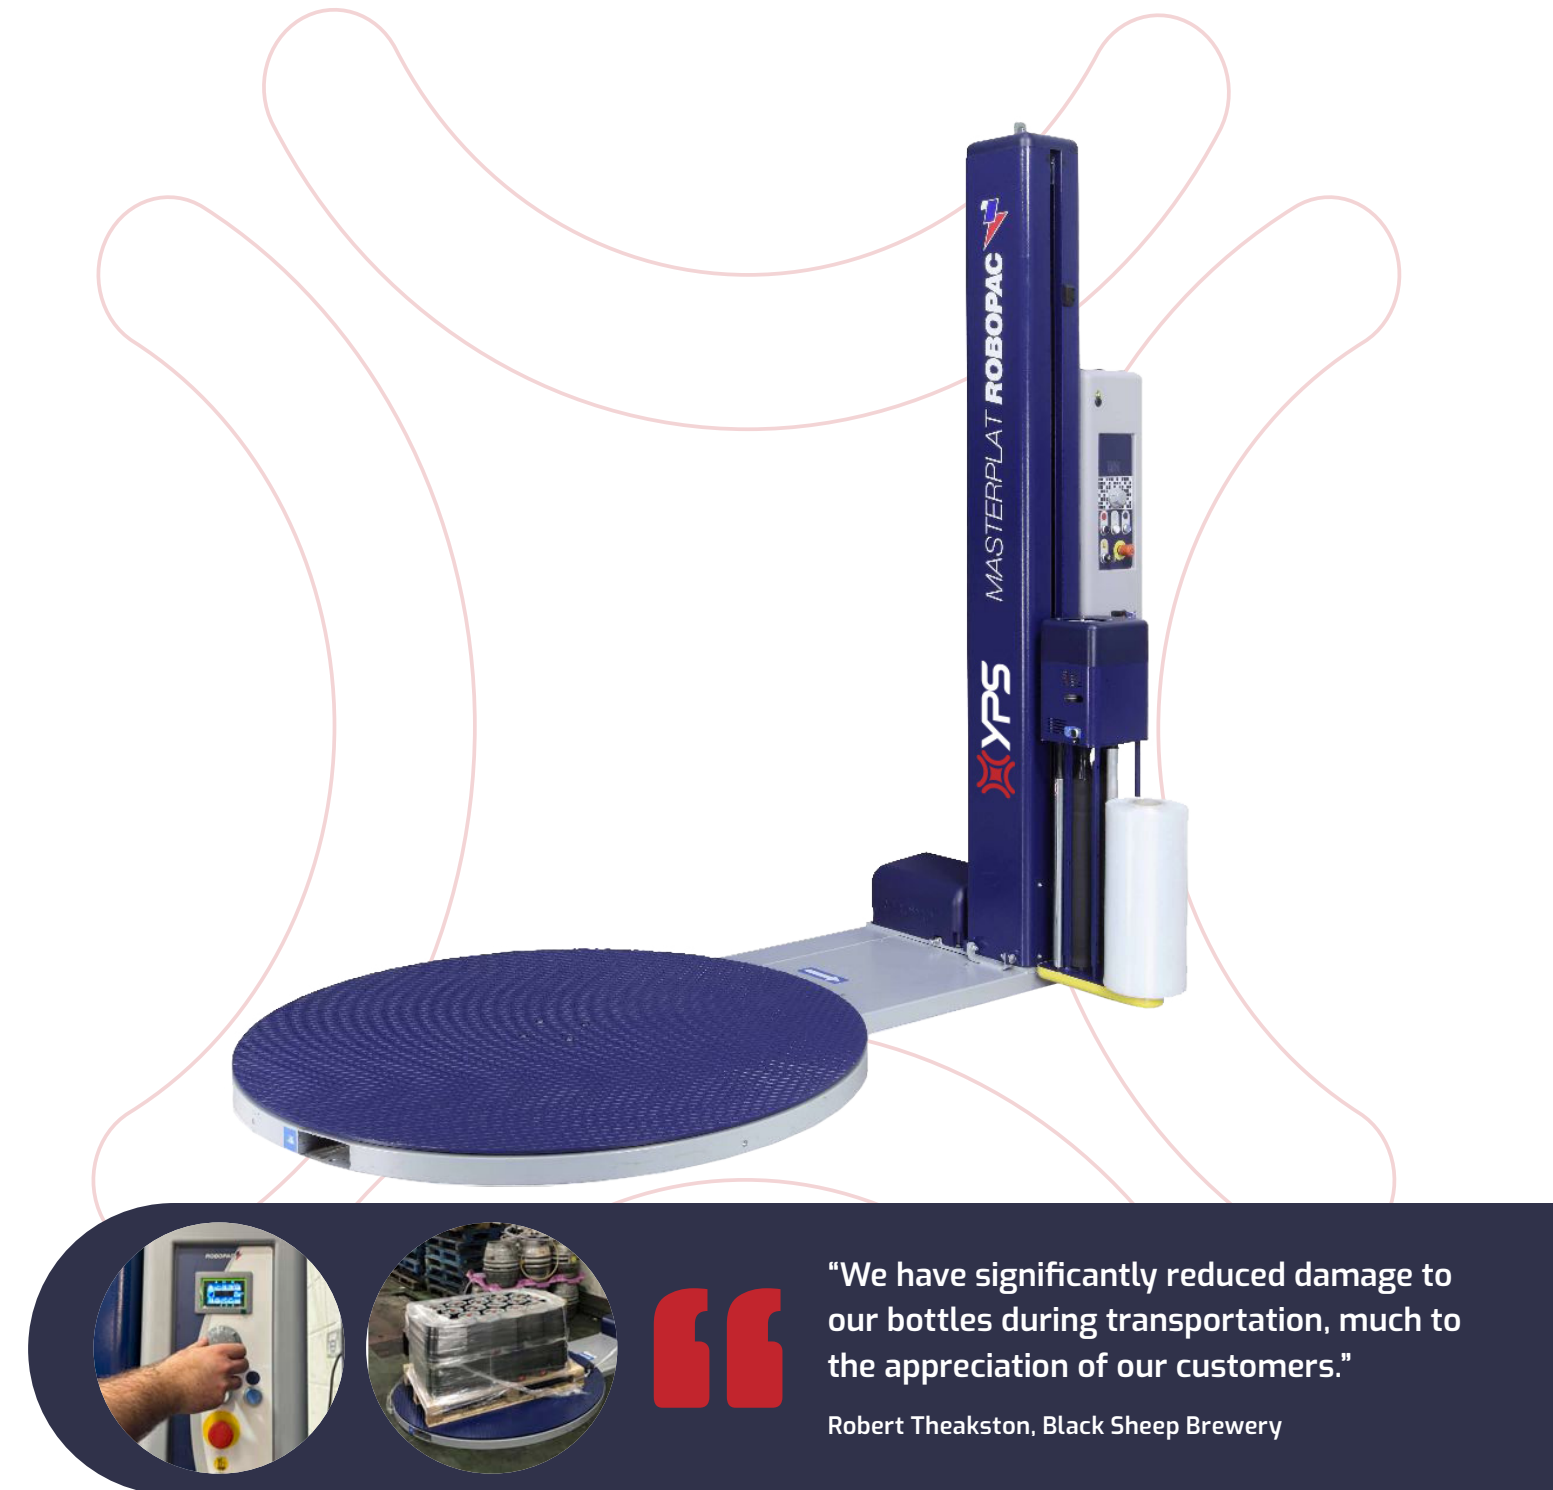

Compact and portable, these wrappers offer total flexibility, moving easily to any location to wrap the pallet, so no forklift is required to move the pallet to the wrapper.

Optional extras such as digital weight scales, freezer-proof systems and stainless finishes are available and varying speeds, film carriage types, loading ramps and wrapping cycles can be catered for.

For turntable models, turntables vary from 1500 mm diameter up to 2400 mm. Mast heights vary up to 3100mm.

Key Benefits :

- Requires pallets to be positioned by an operator with a pump truck or forklift.
- Stretch capacity of up to 500% can be achieved.
- Lots of optional extras available to create the ideal system.
- Full expert site audits conducted to improve and streamline your operation.
- Included service contract to deliver long-term hassle-free maintenance.

"We have significantly reduced damage to our bottles during transportation, much to the appreciation of our customers."

Robert Theakston, Black Sheep Brewery

STRETCH FILMS

Fully recyclable stretch films with a range of attributes for the perfect wrap.

Yorkshire Packaging Systems supply BRC-certified, fully recyclable stretch wrap films to offer the utmost protection to palletised goods in transit or storage.

These films are available in a range of widths, microns and stretch ratios to suit any application or warehouse operation and promise the highest of quality compared to competitor films on the market.

Extreme stretch films, offering 300%+ stretch ratios, require less film per pallet as they can be stretched further, reducing film volumes and cost. Ultra-thin films also reduce plastic consumption while offering the same robust, hardwearing wrap.

In addition, breathable stretch film is on offer for ventilation needs and to prevent moisture issues, ideal for perishable food items.

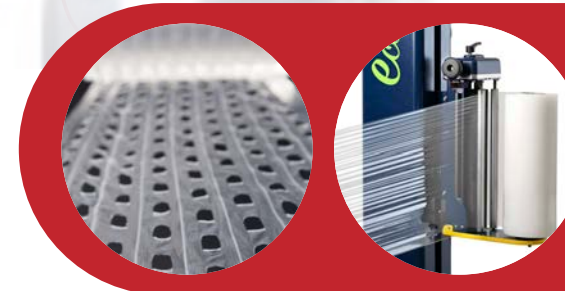

All of our stretch wrap film products are fully recyclable to LDPE level 4 and many can also be supplied with a minimum of 30% recycled content if preferred.

To maintain your pallet wrapping operation, delivery of our films anywhere in the UK and Ireland on a next-day basis is made possible by our large centrally-located warehouse and extensive stock-holding.

In addition, a convenient call-off facility is also available for an 'on-tap' film supply arrangement.

Key Benefits :

- All fully recyclable to LDPE level 4.
- Many films available with 30%+ recycled content.
- A range of widths, microns and stretch ratios for the ideal film for your operation.
- Wide range held in our centrally-located warehouse for next-day delivery across the UK.
- Convenient call-off facility also available.

"YPS were very knowledgeable and professional throughout and delivered on every aspect of our requirements."

Seamus Hartnett, Xtratherm

OUR STRETCH WRAPPING MACHINES IN ACTION...

Who?

Black Sheep Brewery

Where?

📍 **Masham, North Yorkshire**

The Problem

With a new bottling line already in place, including tray erector loaders, shrink wrapping machinery and a palletiser, the Brewery needed to round off the project with a robust stretch wrapping unit and were looking for a fast installation to commence production as soon as possible.

Protection against transit damage is always important, but with bottles to be packed as well as cans and casks, pallet protection had to be first class.

The Complete Solution

YPS supplied a robust and reliable turntable stretch wrapping machine manufactured by Robopac, which more than met the brewery's speed requirements of 5 pallets an hour. It boasted a power pre-stretch film carriage to maximise the yield from each roll of stretch film and improve the load containment force for each and every pallet. A pump truck ramp was also supplied to ensure easy and safe loading of product onto the turntable.

The Benefits

The equipment was delivered and commissioned in less than one month from the date of initial enquiry and has been preparing consistently wrapped pallets of Black Sheep's delicious beers for transit ever since. The brewery has reported a significant reduction in transit damage for their bottles. In addition, we included a service visit and extended 36-month parts warranty to keep the unit running at peak performance for years to come.

“YPS were prompt, efficient and professional from the outset, understanding our time-sensitive requirement.”

Robert Theakston, Black Sheep Brewery

BACKUP AND SUPPORT:

- ✓ One of the largest teams of directly employed service engineers in the UK
- ✓ SafeContractor approved
- ✓ Full operator training
- ✓ One-to-one contact with your installation engineer
- ✓ All spare parts are kept in stock at YPS
- ✓ Quick response to call outs
- ✓ Convenient servicing schedules
- ✓ **Comprehensive service contracts** to ensure your machine is kept in peak condition

Your Packaging Is Our Priority
